

Group Progress Report

Group: Jawad Hoballah, Jeremy Nezaria, Michelle Wei

Project: Anesthesia monitor

Date: 11/19/17

Goals for the past week (copied from last progress report)

1. Go into lab and test some simple circuits for generating constant current with varying impedances
2. Receive the monitor from Dr. Grant
3. Finish the finger tremor project by Wednesday.

For each goal above, comment on your progress:

1. We did not make progress on testing circuitry for our anesthesia project. All of our lab time was spent on completing the finger tremor project.
2. We did not receive the monitor. We will follow up with Dr. Grant this week.
3. We completed the enclosure design, circuitry, and software testing. We are scheduling a time to print our PCB.

Goals for this week:

1. Go into lab and test some simple circuits for generating constant current with varying impedances
2. Follow up with Dr. Grant to obtain the monitor for testing
3. Complete and present the finger tremor project immediately after Thanksgiving break.

Are there any difficulties with which you need assistance?

No.
